DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 13 and 15 are rejected under 35 U.S.C. 102(b) as being anticipated by Landis et al. US patent 5,588,148.

As per claim 13 and 15, Jones teaches user profile stored in a file location on the user's computer and on the server [see col.4 lines 22-25].

PRODUCT-BY-PROCESS CLAIMS ARE NOT LIMITED TO THE MANIPULATIONS OF THE RECITED STEPS, ONLY THE STRUCTURE IMPLIED BY THE STEPS. "[E]ven though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process." In re Thorpe, 777 F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985). See MPEP 2113.

Allowable Subject Matter

Claims 1-12, 14, and 16 are allowable. The prior arts do not teach nor suggest the steps of determining if a user profile exists on a server; if not then obtain user input for creating the profile; embedding a copy of the profile into an action tag

Art Unit: 2153

pointing to a download package through a data filter on the server; generating a download package including profile data and extraction program; generating HTML page including the action tag for actuation by the user for downloading; upon execution of the action tag, the data filter transfers the user profile from the tag into the download package and downloading the package; upon opening the package, running the extraction program to extract the profile from the package and saving the profile on the end user's computer.
